Final Project Presentation

To read:

- "Reflection Toolkit", https://www.ed.ac.uk/reflection/reflectors-toolkit

Materials:

- Computer, laptop, or tablet

Instructions:

- For your final project presentation, you will record a **five minute** presentation about your digital exhibit using Microsoft Stream, Screencast-o-matic, PowerPoint, VoiceThread, or any other software or platform that allows you to record your screen or provide a screenshot of your exhibit and with text or audio captions.
- Your presentation must discuss and reflect upon your digital exhibit, including some or all of the following questions:
    - How and why you chose your topic
    - Why you chose your design and narrative, what other options you considered, and why you did or did not choose those options
    - Why you chose the specific primary sources you chose
    - How the primary sources you chose contribute to the narrative
    - How you dealt with any technical challenges with your platform of choice
    - What did you learn
    - What did you do well and what you could have done better
    - Knowing what you know now and after undergoing a peer review, what you would change about your exhibit
- Ultimately, the goal of the presentation is for you to reflect on the process of creating your exhibit. You are welcome to include questions outside of the ones outlined above—these are just to get you started in thinking about your project and the process of peer review.
- Save your file as FirstName_LastName.(whatever file type is relevant), upload your file to your Marshall OneDrive, and share the link in the assignment upload section in Blackboard.
